ABSTRACTED-PUB-NO: RD 333065A  
BASIC-ABSTRACT:

Porous plaque is made for a battery by; coating a metallic current collector with a base layer of Ni powder in an insoluble cellulose-based slurry, the Ni powder being of a form that react more readily with the substrate at the sintering temp. than with the Ni powder of the plaque layer; adding a plaque layer of Ni powder in a cellulose-based slurry; and sintering to form sintered porous plaque.

ADVANTAGE - Use of an insol. cellulose base layer contg. Ni powder more reactive to the substrate than the plaque layer provides a high strength porous plaque using only one sinterin step.
